Recent remarkable discoveries in cosmology

Type Ia supernovae reveal the accelerating universe.

Variations in temperature of the cosmic background radiation yield the age, geometry, and other features of the universe.

Sky surveys like the Sloan probe the origins of galaxies and the enormous clustering of galaxies.

Public presentations by six world renowned astronomers

April 12-16, 2004
Rudder Tower
Texas A&M

Technical conference website: http://cosmology.tamu.edu
Conference chair: Roland E. Allen, allen@tamu.edu
Sponsored by the George P. and Cynthia W. Mitchell Institute for Fundamental Physics
